The present invention describes isolated polymucleotides (PN) comprising a sequence which hybridises under high stringency with a rice betaCC glucanase gene. Also described are: (A) a chimmeric gene (CGI) used to produce a transgenic monocot plant, comprising: (1) a transcriptional regulatory region which hybridises under high stringency with a rice beta equilatory region which hybridises under high stringency with a rice beta regulatory region, and (ii) a DNA sequence heterologous to the regulatory region, and encoding a protein to be produced by the plant; and (iii) a second DNA sequence encoding a signal polypeptide operatively linked 5 to 3', so that the signal polypeptide is in translation frame with the protein, and is effective to facilitate secretion of the protein across aleurone or scutellar epithelium layers into the endosperm of across aleurone or scutellar epithelium layers into the endosperm of across aleurone or scutellar epithelium layers into the endosperm of companient of monocot plant of method of enhancing the resistance of a monocot plant to fungal infection by stably transforming creasistance of a monocot plant with CGI, obtaining seeds from the cransforming a plant with CGI, obtaining seeds from the cransforming a plant with CGI, obtaining the characteristics of a rice beta-glucanase enzyme, corresponding to beta-glucanases 2-9 (Gns 2-9). The polymucleotides of the invention are useful to transform monocot correspondence to fungal infection, improved growth characteristics, and high expression levels of heterologous proteins in companience con funcased resistance to fungal infection, improved growth 183 GCAATCCCGAGAGGCGTGGAATCCATTGGGGTCTGCAATGGAATGGACGGGGAAACCTC 123 63 57 TACAGCCCCGACCAGAGCCATCCAGGCCTCTAACATCTACCTCATCCTC 1 ATGGCAAAGCATGGCGTTGCTTCCGTTTTAACACTGGCATTGGTCCTTGGAG---TTGCG 4 ATGCCAGCTCAGCACATCATCTCCATGGCTGCCATCCCTCCTTGTAGTACTCTCG Gaps 37.9%; Score 426.4; DB 2; Length 993; 66.2%; Pred. Rice; beta-glucanase; Gns; promoter; plant resistance; expression; fungal infection; transgenic monocotyledon; growth; ss. Rice beta-glucanase gene Gns5. WO9859046-A1. 07-JUL-1999 30-DEC-1998 fundal Oryza

The present invention describes isolated polymucleotides (FV) comprising a sequence which hybridises under high stringency with a rice betaglucanase gene. Also described are: (A) a chimeric gene (CG1) used to glucanase gene. Also described are: (A) a chimeric gene (CG1) used to groduce a transgenic monocot plant, comprising; (1) a transcriptional regulatory region which hybridises under high stringency with a rice beta glucanase promoter; and (ii) a DNA sequence heterologous to the regulatory region, and encoding a protein to be produced by the plant; and (iii) a second DNA sequence encoding a signal polypeptide operatively linked 5' to 3', so that the signal polypeptide is in translation frame with the protein, and is effective to facilitate secretion of the protein across aleurone or scutellar epithelium layers into the endosperm of seeds obtained from the plant; (B) a monocot plant stably transformed cross stance of a monocot plant to fungal infection by stably transforming the resistance of a monocot plant to fungal infection by stably transforming a plant with CG1, obtaining seeds from the entangence of the seeds and obtaining the protein from the seed endosperm; (F) an isolated protein having the characteristics of the polymucleotides of the invention are useful to transform encoct plants. The polymucleotides and the proteins produced may also provide the arrear arrearies in the increased resistance to fungal infection, improved growth comprising characteristics, and high expression levels of heterologous proteins in New polynucleotides which hybridise with rice beta-glucanase genes useful for transforming monocot plants for various characteristics including increased resistance to fungal infection. present invention describes isolated polynucleotides (PN) various tissues obtained from the plant Claim 1; Page 30; 90pp; English. WPI; 1999-105620/09.

             This is the nucleotide sequence of a DNA molecule termed GLUC. The invention provides isolated DNA molecules which are differentially expressed during banana fruit development, and the protein products of these genes. The DNA is selected from a group comprising starch synthase, chitinase, endochitinase, beta-1,3-glucanase, thaumatin-like protein, protein. The regulatory elements of the genes can be used to produce chimeric genes for transformation of plants to provide controlled expression of heterologous DNA during fruit development, or in response to exogenous developmental signals, such as ethylene signals. The heterologous protein, e.g. a therapeutic protein, can be isolated from the fruit or consumed directly in the transformed fruit. The identity of the present sequence is not given. The entire DNA sequence has been decoded in all 3 reading frames to provide the amino acid sequences given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2197

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes isolated polynucleotides (PN) comprising a sequence which hybridies under high stringency with a rice beta-glucanase gene. Also described are: (A) a chimmeric gene (GG1) used to produce a transgenic monocot plant, comprising: (I) a transcriptional regulatory region which hybridises under high stringency with a rice beta equilatory region which hybridises under high stringency with a rice beta cylucanase promoter; and (ii) a DNA sequence heterologous to the regulatory region, and encoding a protein to be produced by the plant; and (iii) a second DNA sequence encoding a signal polypeptide operatively cond (iii) a second DNA sequence encoding a signal polypeptide operatively and (iii) a second DNA sequence encoding a signal polypeptide operatively conditive by the protein, and is effective to facilitate secretion of the protein cutto the protein, and is effective to facilitate secretion of the protein across aleurone or scutellar epithelium layers into the endosperm of consistence of a monocot plant; (B) a menocot plant stably transforming the creatscane of a monocot plant to fungal infection by stably transforming stably transforming a plant with CG1, obtaining seeds from the seed endosperm; (F) an isolated protein having the characteristics of the seed endosperm; (F) an isolated protein having the characteristics of
                                                                                                                                              1019

a rice beta-glucanase enzyme, corresponding to beta-glucanases 2-9 (Gns 2-9). The polymuclectides of the invention are useful to transform monocot plants. The polymuclectides and the proteins produced may also provide increased resistance to fungal infection, improved growth characteristics, and high expression levels of heterologous proteins in various tissues obtained from the plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

This sequence is derived from a transcript from the distal promoter of the (1-3,1-4)-beta-glucanase isoenzyme EI gene. (See also AAQ24290.) EI is synthesized in germinating barley grain where it acts to depolymerise the beta-glucans in the cell walls of the starchy endosperm. Low levels of the enzyme leads to high levels of the glucans and this can cause a reduced malt quality, serious filtration difficulties in the product. The isolated EI gene can be transfered to plants to generate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          product. The isolated EI gene can be transfered to plants to generate varieties which have improved malting and brewing properties. Alternatively the gene can be introduced into yeast to remove residual beta-glucan in beer prodn. This protein can be mutated to generate a m

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                13-JAN-2005 (first entry) ```

New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improved biological characteristics.

Claim 1; SEQ ID NO 5007; 14pp; English.

The Invention relates a recombinant DNA construct comprising a polymerleotide having any of 5544 nucleotide sequences (CDNAB SEG ID NO: 1-5549) and encoding a polypeptide with any of 5544 amino acid sequences (1-5549) and encoding a polypeptide with any of 5544 amino acid sequences (1-5549) and encoding a polypeptide with any of 5544 amino acid sequences (1-5549) and encoding a polypeptide and procession of the comprising transforming a gequence is detrived from which organism. Also included is a method of producing a plant call operably joined to a polymucleotide encoding a plant with a recombinant DNA construct comprising a promoter region to plant with a recombinant DNA construct comprising a promoter region of plant with a recombinant DNA construct comprising a promoter region of plant with a recombinant DNA construct of plant with a recombination in plant cells by modification of the cell cycle plant. The property is selected from improving plant colerance to plant disease, for glactomannan production, for production of pathway, for improving plant disease, for improving plant tolerance to plant disease, for improving plant tolerance to perhodus recombination in plants, for improving plant tolerance to extreme osmocit conditions, for improving plant tolerance to extreme osmocit conditions, for improving plant tolerance to pathogens or peats, for yield improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake and for yield improvement by providing improved plant growth and each or actor. The methods and compositions of the present under at least one stress condition. The polymucleotide may also encode a plant transcription for providing improved plants with improved biological characteristics such as increased yield, improved in particular for producing transgenic plants with improved colerance to extreme osmocit and drought conditions, and improving plant colerance to plant peatent sequence is of the invention are useful in the field of biochemistry and colerance to plant peater invention relates a recombinant DNA construct comprising a electronic format directly from USPTO at segdata.uspto.gov/seguence.html?DocID=20040216190.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence encodes the 1229bp cDNA of barley (1-3,1-4)-beta-glucanase isoenzyme EII. EII is synthesized in germinating barley grain where it earsts to depolymerise the beta-glucans in the cell walls of the starchy endosperm. Low levels of the enzyme leads to high levels of the glucans and this can cause a reduced malt quality, serious filtration difficulties in the brewing process and can contribute to haze formation in the final product. The isolated EII gene can be transfered to plants to generate varieties which have improved malting and brewing properties. Alternatively the gene can be introduced into yeast to remove residual betarglucan in bear prodn. This protein can be mutated to generate a more

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AGCCACTCTCCAGGCCCTCCAGGGCTCTAACATCTACCTCATCCTCGACGTCCCCAACTC 257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomanan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert polymucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      77
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ffp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CAACGCGCTGAACGCGCTGAGCGGCACCAGCATCGGGCTCATCATGAACGTGCCCAACAC

This sequence 'Encodes (1-3,1-4)-beta-glucanase isoenzyme EI gene, showing the two promoter regions, the distal and proximal promoters. The two transcripts produce the same mature protein but have different signal peptides. The transcript from the distal promoter is 4169pp long and contains an intron of 2513bp. This intron is unusually long for a plant intron which have an average length being 249bp. The signal peptide produced from this transcript is 28 amino acids long. The transcript from the distal promoter is 3807bp and contains an intron of 54bp. The signal peptide produced from this transcript is 23 amino acids long. There is some evidence that suggests that these differing introns may have some roole in exon "shuffiling". BI is synthesized in germinating barley grain where it acts to depolymerise the beta-glucans in the cell walls of the starch where it acts to depolymerise the beta-glucans in the cell walls of the starch where it acts an cause a reduced malt quality, serious filtration difficulties in the brewing process and can contribute to haze formation to the final product. The isolated BI gene can be transfered to plants to generate varieties which have improved malting and brewing properties.

Alternatively the gene can be introduced into yeast to remove residual the pharmals and this an experience of the product in the brewing protect of the subject of pervises.

Alternatively the gene can be introduced into yeast to remove residual the pharmals and the product. This protein can be mutated to generate a more the product.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and Ell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           encoding barley (1-3,1-4)-beta-glucanase isoenzyme(s) E1 and E11
1 to improve quality of barley for malting and brewing processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           comments

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             nucleic acid markers on wheat genetic background. The primer set is useful for detecting nucleic acid markers derived from barley chromosome on wheat genetic background. The primer set is useful for determining whether the long arm of 1H chromosome of barley has been introduced into wheat, and for determining fertility of wheat. The method enables detection of nucleic acid markers derived from long arm of 1H chromosome of barley on wheat genetic background. The present sequence represents a barley gene used to design PCR primers ADL18230 and ADL18231 of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Addecirioságrecarecegereracesearicasececeaaaaarerseceseseas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CACCGTGGTCAACATGTTCAAGTCCAACGGGATCAACTCCATGCGCTGTACGCTCCCGA

polymucleotides that are modulated by post-transcriptional gene silencing polymucleotides that are modulated by post-transcriptional gene silencing (FYGS). Specifically, it refers to the regulation of gene expression in plants via PTGS and the trans-activation of homologous genes due to increased RNA degradation. The present invention describes clusters of polymucleotides from cereals, in particular rice, as well as homologues and the polypeptide sequences derived thereof, where gene expression is altered in response to PYGS. As such, the elucidation of gene silencing mechanisms can lead to more efficiently expressed transgenes, and can also improve the understanding of plant-viral interactions and targeting the suppression of specific plant genes. This polymucleotide sequence is a rice CDNA sequence where expression is modulated by gene silencing. Contappers in the printed specification but has been obtained in electronic format from the US patent office at electronic format from the US patent office at the sequence contapped to the contapped useful for modulating gene expression within a cell ä This invention relates to a novel method for identifying isolated s SP, Cooper B, Glazebrook J; Moughamer T, Provart N, Ricke Example 15; SEQ ID NO 439; 79pp; English H, Briggs SP, Kreps J, Mough posttranscriptional gene silencing. /clone lib="riticum and leaf; Vector: pCMV.SPORT6; Aerial
parts (crown and leaf) of wheat cultivar Norstar from
control and long exposure times to low temperature. 4 mRNA
populations were combined before constructing the library;
7 days non-acclimated plants and 1, 23, and 53 days
cold-acclimated at 4C. Non-acclimated and cold-acclimated
plants were grown in vermiculite This is the only library
that was done according to the Invitrogen manual, and
therefore, a percentage of clones will not have the 3
prime end because of Not1 digestion within the cDNA."

```
growth chamber for 7 days under an irradiance of 200 mmol m-2 sec-1. The temperature was maintained at 20 degrees C with a 15-hr photoperiod under a relative humidity of 70%. After this period watering of plants was stopped. Four time points were sampled during a two week period; the first after wilting was observed and the last, two weeks later, consisted of live crown and leaf tissue (leaf tissue that was yellow was not included in sampled material). First strand synthesis in this library was done in the presence of methylated dCTP thereby protecting from internal cleavage with Not!."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ATGGCGAGCCAAGGTGTTGCCTCCATGTTCGCTCTGGCATTGCTCCTCGGAGCCTTCGCC 134
